

Restaurant Finder Project Documentation

2. Literature Review

2.1 Feedback & Evaluation

The proposed Restaurant Finder system has been evaluated based on modern web application standards and user expectations. The system focuses on usability, responsiveness, and efficient navigation. Using React enables component reusability and improves performance. However, system effectiveness depends on data quality, UI responsiveness, and overall user experience.

2.2 Suggested Improvements

- 1 Implement recommendation system based on user behavior
- 2 Add authentication system (login/register)
- 3 Integrate user reviews and ratings
- 4 Improve search and filtering performance
- 5 Add geolocation support
- 6 Enhance UI/UX design
- 7 Provide dark mode
- 8 Ensure full responsiveness

2.3 Final Grading Criteria

Criteria	Weight
Implementation	30%
UI/UX Design	20%
Documentation	20%
Testing	15%
Presentation	15%

3. Requirements Gathering

3.1 Stakeholder Analysis

- 1 Users: search and explore restaurants easily
- 2 Admin: manage restaurant data
- 3 Developers: build and maintain system

3.2 User Stories

- 1 As a user, I want to search for restaurants so that I can find places to eat
- 2 As a user, I want to filter results so that I can choose the best option
- 3 As a user, I want to view restaurant details so that I can make decisions

3.3 Functional Requirements

- 1 Allow users to search restaurants
- 2 Display restaurant details
- 3 Filter by category and rating
- 4 Save favorites

3.4 Non-Functional Requirements

- 1 Fast loading time
- 2 Responsive design
- 3 Secure data handling
- 4 High availability
