

4. UI/UX Design & Prototyping

4.1 Wireframes & Mockups

The user interface of the *Restaurant Finder* system was developed through a structured UI/UX design process to ensure usability, clarity, and efficiency. The process began with low-fidelity wireframes to define layout and structure, followed by high-fidelity mockups to represent the final visual design.

Wireframes focus on user flow and component placement, while mockups focus on visual appearance including colors, typography, and spacing.

Home Page Design

The home page is designed to support both search-driven users and browsing users. It includes a central search bar, category navigation, and a grid of restaurant cards to enhance discovery.

- **Wireframe**

The wireframe defines the layout structure of the home page, including the positioning of the search bar, categories, and content sections, ensuring a smooth and intuitive user flow.

- **Mockup**

The mockup represents the final visual design of the home page, including colors, images, typography, and interactive UI elements.

Explore Page Design

The explore page allows users to efficiently browse and filter restaurants using advanced filtering options.

- **Wireframe**

The wireframe focuses on structuring the filter sidebar and arranging the restaurant results in a responsive grid layout.

• Mockup

The mockup enhances the user experience by applying visual styling, interactive filters, and responsive design elements.

Restaurant Details Page

This page provides detailed information about a selected restaurant, helping users make informed decisions.

• Wireframe

The wireframe organizes content such as images, menu, ratings, and reviews into clearly defined sections.

• Mockup

The mockup presents the final interface with high-quality visuals, structured layout, and engaging design elements.

Authentication Pages

The authentication pages include login and registration screens designed for a smooth onboarding experience.

• Wireframe

Focuses on simple input fields and clean layout to reduce friction during user entry.

- **Mockup**

Includes final styling with clear buttons, proper spacing, and user-friendly interface elements.

Saved & Profile Pages

These pages allow users to manage saved restaurants and personalize their experience.

- **Wireframe**

Defines layout for saved items and user information in a structured and accessible format.

- **Mockup**

Applies final design elements to enhance usability and visual appeal.

4.2 UI/UX Guidelines

Design Principles

The design of the *Restaurant Finder* system is based on fundamental UI/UX principles that ensure a seamless and intuitive user experience. The interface emphasizes:

- **Simplicity** to minimize user effort
- **Consistency** across all screens and components
- **User-Centered Design** to align with user needs and expectations

Each element in the interface is carefully designed to enhance usability, reduce cognitive load, and improve overall interaction flow.

Color Scheme

A carefully selected, food-inspired color palette is used to create a visually engaging and comfortable experience:

- **Orange** → Used for primary actions and call-to-action buttons to attract attention
- **Green** → Represents ratings, success states, and positive feedback
- **Neutral Colors** → Used for backgrounds to ensure visual balance and reduce eye strain

This combination helps guide user attention while maintaining aesthetic harmony.

Typography

Typography plays a critical role in readability and visual hierarchy. The system uses:

- **Bold and prominent headings** to highlight important sections
- **Clear and simple body text** for easy reading
- **Consistent font styles** across all pages

This structured approach ensures that users can quickly scan and understand content.

Layout & Spacing

The interface layout is built using an **8-point grid system**, which ensures:

- Consistent alignment of elements
- Balanced spacing between components
- Clean and uncluttered design

Proper use of whitespace enhances readability and improves the overall visual structure of the application.

Responsiveness

The system is fully responsive and optimized for multiple devices, including:

- Desktop

- Tablet
- Mobile

Layouts dynamically adapt to different screen sizes to ensure a consistent user experience across all platforms.

Accessibility

Accessibility is a key consideration in the design to ensure usability for all users. The system includes:

- Sufficient contrast between text and background
- Readable font sizes
- Simple and intuitive navigation patterns

These features help make the application inclusive and user-friendly.

User Experience Enhancements

To improve engagement and provide better feedback, the system incorporates several micro-interactions, such as:

- Hover effects on interactive elements
- Smooth transitions between pages
- Loading indicators to inform users of system status

These enhancements contribute to a more dynamic and responsive user experience.
